Sydney Informatics Hub

Statistics

- Experiment and survey design
- Meta-analysis
- Survival analysis
- Statistical modelling

Data Science & Software

- Machine Learning & AI
- Timeseries, clinical trials, geospatial
- Software for data-driven research

Research Computing

- High performance computing,
- Virtual desktop computing,
- Modelling and Simulation
- Data community building

Bioinformatics

- A variety of omics partnered with national facilities and research infrastructure
- Reproducible and scalable workflows

Training **Consultation** **Grant support** **Projects** **Research Compute Platforms**
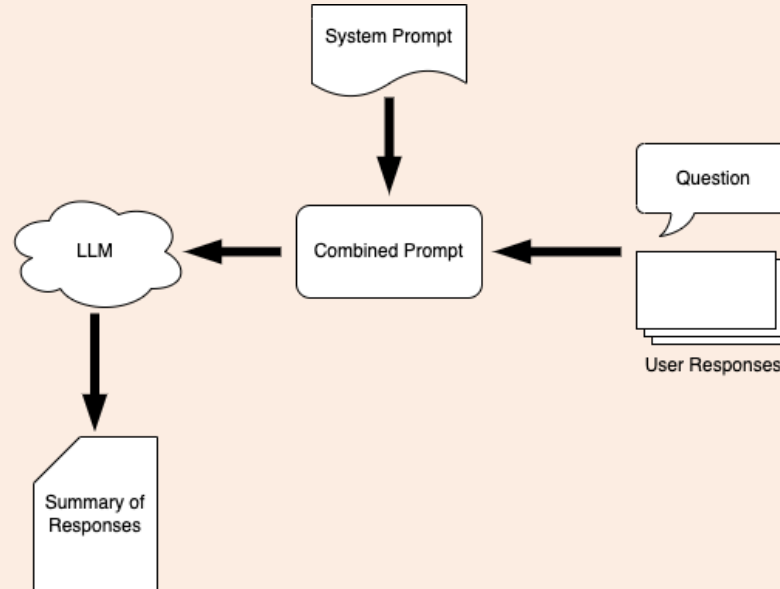

Grading the Machine

How does it work?

For each workshop:

1. You write your thoughts in your table's Padlet

2. We extract and ask GPT4 to summarize it.

3. You grade the answers in a new Padlet!

4. We compute the overall grade

How are we using GPT to summarize?

Retrieval Augmented Chat Bot

"Is further information needed?"

"Did this answer your question?"
